## **Caroma Electronic Urinals**

Featuring the latest in water saving technologies and superior operational performance, Caroma Electronic Urinals are ideal for commercial bathroom spaces.

## Caroma Cube 0.8L Series II Electronic Urinal

Ideal for general purpose applications where water conservation is a priority, the Cube 0.8L Series II Electronic Urinal boasts the maximum WELS 6 star rating resulting in **60% less water**<sup>1</sup> being used compared to standard 2L single stall models, or even more for multiple stall installations. With superior hydraulic design and performance, and embracing the modern look of softened angles and clean lines, this vitreous china urinal can enhance the appearance of any contemporary bathroom.

## Caroma Leda Series II Electronic Urinal

The Leda Electronic Urinal offers the advanced technology of the Caroma Cube with the contemporary design of the Caroma Leda range. The compact wall-hung box rim urinal has a concealed trap, easy to clean surfaces, and features concealed components for optimum appearance and a lower risk of vandalism. It has achieved a WELS 3 star rating.

### Key Features

#### WELS Rating

- WELS 6 star rated urinal suite with an ultra-low 0.8 litre flush for the Cube and 3 star rated for the Leda.

#### Water Saving

- 'Smart Demand' technology with an integrated smart logic system detects usage and activates the flush mode accordingly. An additional new water saving mode has now been added for increased flexibility.
  - *NEW* 'Smart Flush' water saving mode minimises water usage. During normal use frequency, the unit will flush after every use. If a higher usage frequency is detected, the unit will flush once after the second use, after which the unit will not flush again for a period of time. The unit will then revert to normal mode and continue to monitor usage.
  - 'Stadium' mode adjusts flush automatically in high use periods. The unit will flush at timed intervals instead of after every use.
- Urine sensing technology is only activated by the user preventing accidental flushes typical in hands-free operated urinals.

#### Hygiene

- Automatic hygiene flush programmable to every 24, 48 or 72 hours from last use.
- Overflow Prevention in the event of drain blockages.

#### Flexible Configurations

- Selectable flush volumes to suit different installation requirements from 0.8 litres/flush up to 2.0 litres/flush.
- Inlet water pressures of 300kPa and 500kPa allowing accurate water usage and flexibility in variable pressure environments.
